### Appraisals in Hurricane Alley

The Insurance appraisal law and tactics on the Gulf Coast and S.E. U.S. states can, at times, mystify the experts who have worked on these claims. These large exposure property losses have been subjected to appraisal demands as a matter of standard practice by public adjusters and counsel for policyholders which have resulted in unexpectedly large awards. This course will provide legal and tactical direction regarding demands for appraisal to achieve the fairest resolution of the claim.

### WEBINAR 2

## Winter 2021 Storm Event in Texas: An Assessment of the Energy System Reliability Failures

Many insurance claims following the extreme winter storm in the February 2021 Texas event were caused by loss of electrical service. Property claims professionals as well as their legal counsel need to better understand the events and timelines associated with loss of electricity so that they can make informed decisions surrounding those claims. This course will describe how the Texas electric market operates and its performance during the recent winter storm.

### WEBINAR 3

## Crumbling Concrete: Anatomy of a Progressive Loss

This course analyzes the nationwide implications of a property insurance crisis that occurred very recently in two New England states in which building foundations experienced significant progressive cracking, generating lawsuits and eventually important court decisions on the meaning of “collapse” in property insurance policies, as well as trigger of coverage issues in progressive losses.
